

HEATING & WATER @ DUNMANUS VIEW

In the utility room (ground floor) slide the below switch to **ON** to obtain heating in the radiators. Otherwise please set the sliding switch to **OFF**...

DURING SUMMER-TIME and heating from radiators is not required, go to the airing cupboard (upstairs) and flick the below switch to **ON**. After approximately 30 minutes, hot water will then be available through the taps & power shower... Please turn the switch off afterwards to save electricity ;)

Please be advised that due to the limited capacity of the hot water cylinder, if you continuously run the power shower, then hot water will only last for **approx' 20 mins** with a full heated cylinder of water. Therefore, if a few people would like to shower at the same time it might be best to minimise the length of time each person showers to avoid running out of hot water!
