

ELECTRICITY

Occasionally, there may be power outages in Ireland. These can be caused by hurricanes (Ophelia being the most recent) and other adverse weather conditions, as well as birds simply flying into electricity cables and tractors colliding with pylons.....!

Should you experience a power cut, firstly check the fuse board/consumer unit for trip switch activation. If there is still no power supply, then call ESB energy (021 238 2410) to report the problem (**quoting MPRN number 10007 183 108**). Subsequently, you will be given an update regarding any known outages and possible rectification times....
